SUMMARY

AI & Data Science student specializing in building end-to-end autonomous systems. Experienced in developing multi-agent AI pipelines, real-time computer vision applications, and event-driven automation workflows using LLMs (Gemini, Groq) and production-grade frameworks like CrewAI and LangChain.

TECHNICAL SKILLS

- **AI & ML:** LLM Orchestration, RAG Pipelines, Computer Vision (YOLOv8), Prompt Engineering
- **Frameworks:** CrewAI, LangChain, FastAPI, Flask, PyTorch, OpenCV
- **Automation & Tools:** n8n Workflow Automation, Git, REST APIs, Linux, PDF Parsing
- **Cloud & Data:** Google Cloud APIs, Pinecone (Vector DB), Google Sheets Integration

KEY PROJECTS

AI-Driven Recruitment Automation & Decision System **2026**

Python, Flask, Gemini, Groq, n8n, ElevenLabs, Gmail/LinkedIn APIs

- Engineered an end-to-end recruitment pipeline that automates candidate sourcing, evaluation, and decision-making.
- Developed a multi-source ingestion layer using Gmail APIs and LinkedIn scraping for unstructured data.
- Implemented an LLM-based scoring engine to rank candidates with automated follow-ups via AI voice calls.

Real-Time Multi-Modal Conversational AI System **2025**

FastAPI, LangChain, Whisper STT, Pinecone, WhatsApp Cloud API, RAG

- Built a stateful, event-driven pipeline for multi-modal interaction in English and Malayalam.
- Integrated a RAG pipeline for contextual response synthesis and a session manager for history tracking.
- Deployed an automated engagement engine for inactivity detection and event-triggered follow-up logic.

Multi-Agent AI Decision System **2025**

Python, CrewAI, LLMs, JSON Orchestration, Workflow Automation

- Designed a collaborative decision-making system using specialized agents for task analysis and market research.
- Utilized CrewAI to coordinate parallel research and synthesis of optimized tool recommendations.
- Implemented structured reasoning outputs to ensure scalable and predictable decision pipelines.

TAPACD - Theater Anti-Piracy AI Camera Detection **2024**

YOLOv8, OpenCV, Flask, Roboflow, Python, Custom Dataset

- Developed a real-time computer vision system to detect mobile phones in restricted zones.
- Fine-tuned a custom YOLOv8 model on a manually labeled dataset optimized for low-light environments.
- Built an automated alert system that logs evidence images and triggers security notifications.

EXPERIENCE

AI Intern — *Ilmora AI Solutions* **Jul 2025 – Oct 2025**

- Contributed to AI-driven projects focused on real-world automation and model performance evaluation.

Student Placement Co-ordinator — *MES College of Engineering* **2024 – 2026**

- Led recruitment drives and coordinated between corporate recruiters and university faculty.

EDUCATION

B.Tech in Artificial Intelligence and Data Science **2022 – 2026**

MES College of Engineering, Kuttippuram (APJ Abdul Kalam Technological University)
